TOPTICA Welcomes INDECO As New Japanese Distributor

Japan is one of the major global markets for the photonics industry, requiring for any laser supplier the maximum local support. TOPTICA has therefore decided to further strengthen its sales and distribution into this territory. Starting from April 1, 2007, the company Indeco Inc. as one of the major and most competent distributors in Japan with more than 40 people and a market experience since 1990 will start to also represent TOPTICA in the scientific and industrial markets of Japan.

TOPTICA's president Dr. Wilhelm Kaenders: "We were specifically attracted by Indeco's large experience in the sales and support of complex laser systems for scientific and industrial applications. We are looking forward very much in cooperating with Indeco." The latest TOPTICA products will be displayed for the first time at the booth of Indeco at the Interopto show in Japan (July 11 - 13, 2007). Maruyama-san, founder and president of Indeco, sees in TOPTICA an important addition to the existing product portfolio in his quest to provide the best value for his Japanese customers also in the future. "We are very impressed by TOPTICA's wide product range and their professionalism to mature innovative instrumentation for industrial markets."

Satoko Takahashi (INDECO)
and Dr. Wilhelm Kaenders
(TOPTICA).

TOPTICA Photonics AG develops, manufactures, services and distributes technology-leading diode and fiber lasers and laser systems for scientific and industrial applications. Sales and service is offered worldwide through TOPTICA Germany and its subsidiary TOPTICA USA, as well as all through 13 distributors. A key point of the company philosophy is the close cooperation between development and research to meet our customers' demanding requirements for sophisticated customized system solutions and their subsequent commercialization.
